October 2010

## Asset management at Nordea

Today, the changing demands of our clients continue to shape the way we do business. To meet these demands, we're taking a new approach to investment management that aligns your interests with ours. It's an approach that brings together multiple boutiques, run by fund managers who have a real financial interest in the decisions they make, and the returns they generate for you.

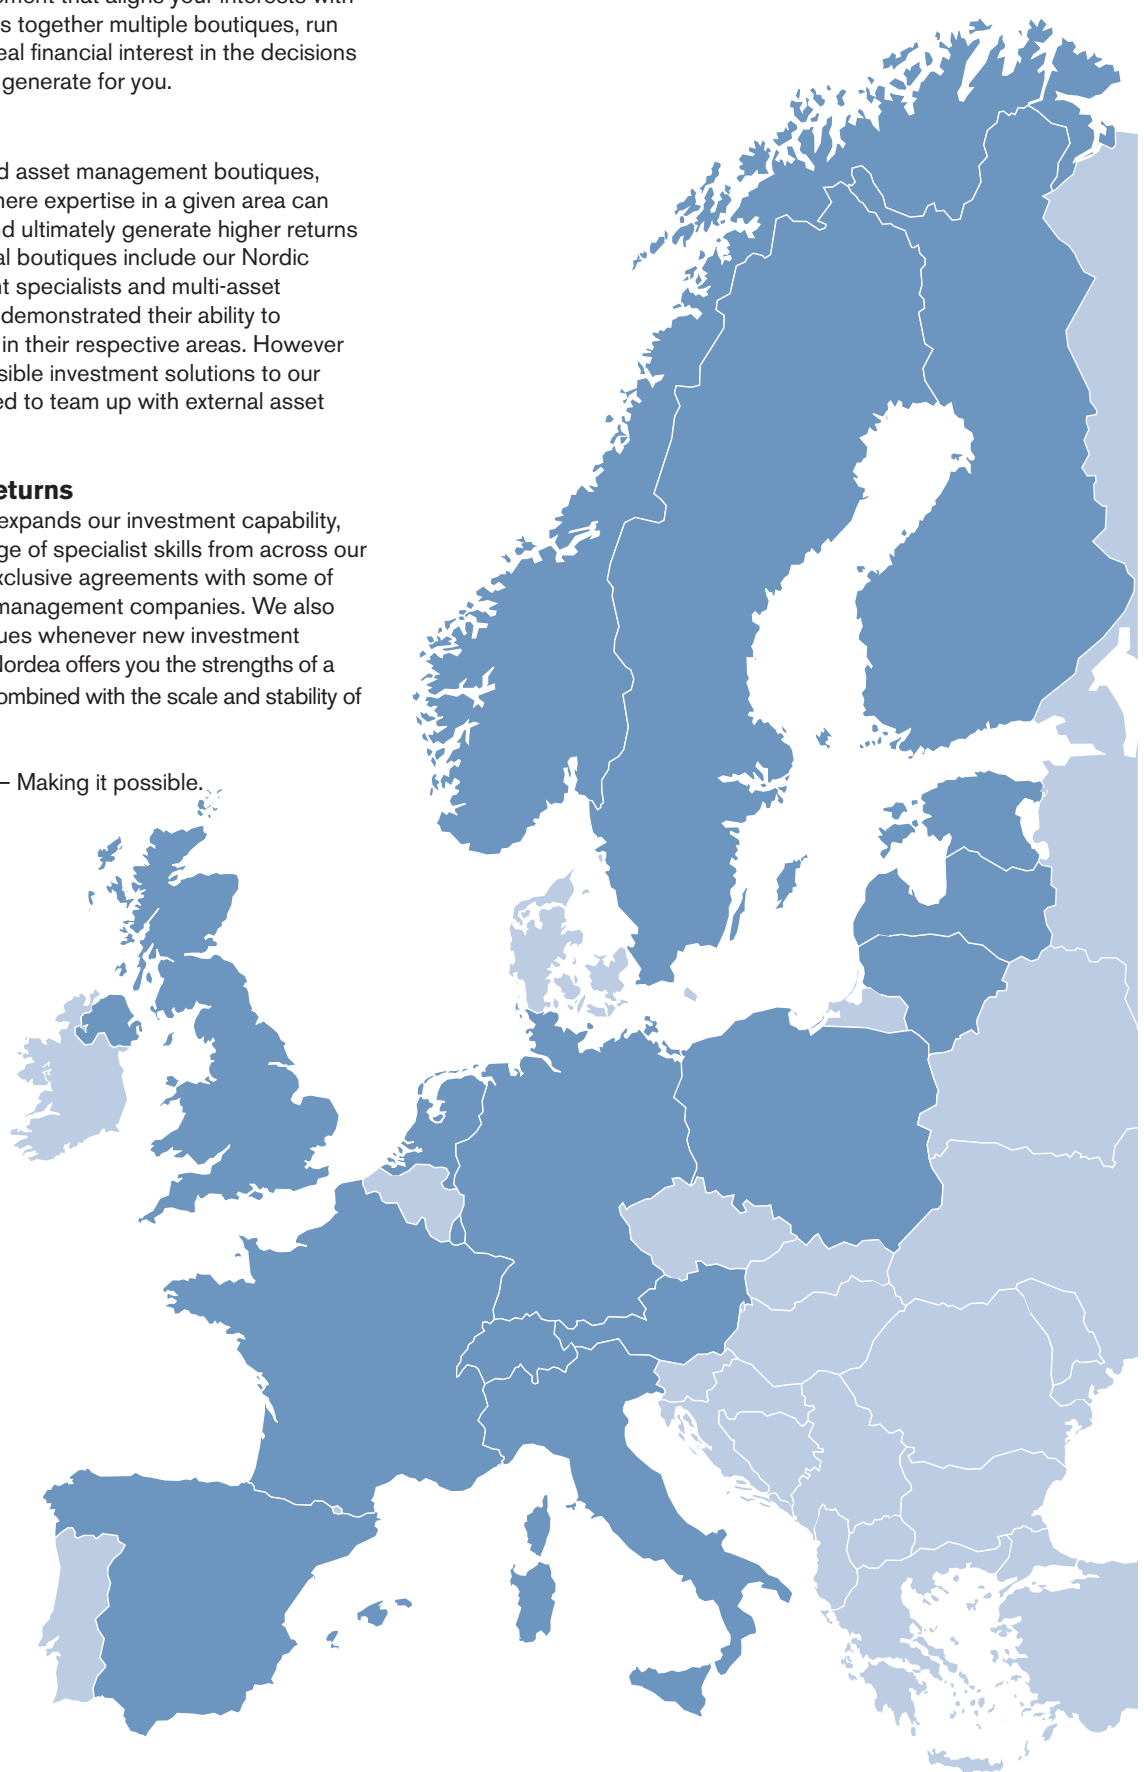

## The boutique approach

Here at Nordea we have created asset management boutiques, both internally and externally, where expertise in a given area can add a competitive advantage and ultimately generate higher returns than those of the market. Internal boutiques include our Nordic equity team, thematic investment specialists and multi-asset professionals, all of whom have demonstrated their ability to produce above average returns in their respective areas. However in order to provide the best possible investment solutions to our customers, we have also decided to team up with external asset management boutiques.

## More choice and better returns

Nordea's multi-boutique model expands our investment capability, giving you access to a wide range of specialist skills from across our boutiques, as well as through exclusive agreements with some of the world's leading investment management companies. We also have the flexibility to add boutiques whenever new investment opportunities arise. This means Nordea offers you the strengths of a boutique investment approach, combined with the scale and stability of a larger organisation.

One platform, many specialists – Making it possible.

 Countries authorised for sales and marketing

### Investment Strategy

The fund selects companies whose earnings are set to grow faster than the market and are driven by domestic economical growth. Sizes and industries differ, however focus is on large innovative companies concentrating on their core business as well as new future growth businesses. Initial allocation is foreseen to be approximately 50% invested in South-African equities and approximately 50 % in other African equities. Exposure to Pan-African equities will be increased according to market development and liquidity.

### Investment Strategy

The fund invests a minimum of two-thirds of its net assets in equities, other equity shares such as co-operative shares and participation certificates (equities and equity rights), dividend-right certificates and warrants on transferable securities issued by biotechnology companies which are domiciled in Europe, North America and the Far East including Japan. The sub-fund invests according to a thematic approach, whereby the fund manager identifies broader themes that are likely to drive cash flows in the foreseeable future. Companies that are expected to capitalise on these themes are then selected.

### Investment Strategy

This fund aims to achieve long-term capital growth through a diversified portfolio of equity or equity related investments in companies, which are expected to benefit either directly or indirectly from developments related to environmental challenges such as climate change. The fund shall invest globally and shall invest a minimum of two thirds of its total assets in equities, other equity shares such as co-operative shares and participation certificates, dividend right certificates, warrants on equities and equity rights.

### Investment Strategy

The fund invests globally in companies, which are expected to benefit either directly or indirectly from the ongoing urbanisation trend and changing consumer behaviour in the emerging market economies. The aim is to select businesses that expect to generate a significant proportion of their earnings from consumers in Emerging Markets, e.g. by establishing themselves as the leading brands. Additionally the fund will focus investment around firms in developed markets that sell products and services targeted towards the marginal spending of the emerging consumer, benefiting from the expected increases in disposable income.

### Investment Strategy

The fund focus is on the quality and attractiveness of individual sectors and companies rather than on the outlook for particular European countries. To achieve its objective, the fund applies an investment approach that uses a top-down analysis consisting of concrete 'gorilla' views. These mega-trends reflect long- and mid-term views, which not only take into account macroeconomic factors but also allow the identification of the most promising sub-sectors or "equity clusters" with the highest growth potential within each gorilla view. These equity clusters are then actively traded to ensure that portfolio allocation is quickly adapted to grasp opportunities as they arise and defend against threats, thus creating superior long-term performance.

### Investment Strategy

The fund seeks to provide durable positive absolute returns by applying a disciplined value style approach. The managers consider themselves as business, rather than stock market, investors. Their approach concentrates on long-term investment and not on market specific factors and short-term phenomena. This means focussing on selecting businesses that will offer upside potential with limited downside risk. The belief that certain businesses have a greater earning power forms the basis of this process. Earning power is defined as a company's ability to generate substantial discretionary free cash flow over a sustained period of time. The managers believe that only in this way can a company generate wealth for its shareholders, and provide long-term capital appreciation. Investments are made on a business by business basis, irrespective of market capitalisation, sector or industry, and only when share prices represent a significant discount to the intrinsic value of the business.

### Investment Strategy

The premise for potential alpha generation is the belief that pricing in the Asian equity markets is inefficient. The fund manager therefore attempts to deliver excess returns by evaluating securities correctly through proprietary fundamental research. While a top-down approach is mainly employed within the country allocation, the bottom-up approach relates mainly to the stock selection within one specific country. The management adopt a "country specialist" approach with regards to investment responsibilities; however it is the fund manager who takes the final decision regarding country allocation and overall investment strategy.

### Investment Strategy

The fund follows a disciplined investment process based on fundamental approach, which combines quantitative and qualitative research. The focus is on finding the winners within various industries and also the factors that drive their growth and profitability. The fund invests globally in competitive and dynamic companies which exhibit attractive valuation and predictability. The fund has a long term investment horizon and avoids companies with operational or financial risks.

### Investment Strategy

The fund applies a unique process to construct a portfolio of "boring" equities with stable returns based on an objective, computer driven, quantitative stock screening model. The process identifies companies that operate in established lines of business, generating consistently stable earnings, dividends, cash flows, etc. This stability helps dampen price volatility of such companies' stocks, making them less risky than the broader market. There is also a high degree of portfolio diversification with 100 to 150 stocks typically making up the portfolio, thereby adding a further layer of stability. The goal then is to offer investors the benefits of long-term return opportunities in the global equity markets, without the risk of significant capital losses in the short to medium term as is the case with conventional "hot" stocks. At least 90% of the portfolio currency risk will be hedged against the Base Currency of the Sub-fund (EUR).

### Investment Strategy

The fund seeks to provide a durable positive absolute return through active investment in a value style biased portfolio of global companies without benchmark constraint. Focus is at the business level, purchasing only securities identified as undervalued in relation to the long-term earning power of the business. Investments will be made when a security is available at a significant discount to the intrinsic value.

### Investment Strategy

The fund aims to outperform the MSCI LatAm 10/40 Index over a three year period through an active top-down and bottom-up, fundamentally oriented investment approach combined with local market insights. The top-down analysis mainly determines country allocation, while the bottom-up analysis has a greater impact on stock picking inside a given country. The most important source of excess return will be stock-picking. The fund is not restricted to stocks which can be qualified as either "value" or "growth". It has a target excess return of 3% per annum above the benchmark and an ex-ante tracking error of  $\pm 6\%$  per annum. The portfolio will hold on average 40-60 stocks, with no short selling allowed. The manager seeks to remain fully invested with a max cash position of 5% although usually this figure will be less than 2%. The fund also limits deviation to the benchmark in terms of maximum sector deviation:  $\pm 5\%$  (typically less than  $\pm 3\%$ ) and maximum country deviation:  $\pm 5\%$  (typically less than  $\pm 3\%$ ). The manager can hold up to 30% of fund assets in ex-benchmark holdings.

### Investment Strategy

The fund taps into a potential investment universe of Nordic-listed companies with a combined market capitalization of around EUR 520 bn. This means that the fund has access to world-class companies with strong global market positions, offering broad sector exposure within a relatively compact geographical area. As it is, the Nordic region has enjoyed more robust growth than the broader Eurozone over the past 10 years, which has been reflected in the equity markets' healthy performance. Also of benefit is a stable political environment despite different paths regarding the EU and EMU. Positive for companies is a technologically receptive environment. Essentially the fund's investment approach involves a fundamental bottom-up process focusing on internal research and targeting stocks with three common characteristics: attractive valuation, positive earnings momentum and positive news flow. Of the 860 or so listed stocks eligible for investment, some 150 are actively covered. Company visits are a vital information source with 200 visits per fund manager a year. The stock market is screened using both external and internal sources with respect to key parameters such as FCFy, EV/EBITDA, EV/EBIT, P/E, etc. Both absolute and relative valuations are considered, with quantitative research supporting, though not determining the weight allocation.

### Investment Strategy

The fund invests a minimum of two-thirds of its net assets in equities, other equity shares such as co-operative shares and participation certificates (equities and equity rights), dividend-right certificates and warrants on transferable securities issued by companies which are domiciled in the Nordic region. It invests according to a fundamental bottom up stock picking approach, whereby The fund manager identifies stocks that will benefit in the future. Stocks are selected on the basis of attractive valuation, positive earnings momentum and positive news flow.

### Investment Strategy

The fund invests primarily in common stocks that represent diversified industry sectors and broad market capitalization. What sets the fund managers' research apart is its lack of reliance on traditional channels of information. Opportunities are instead identified as a result of their proprietary research, which is performed through rigorous analysis of insider activity, fundamental balance sheet analysis, forensic accounting, industry research both internally and via an external research board consisting of experts having held senior executive positions within their respective industries.

### Investment Strategy

The fund aims to identify undervalued companies which are starting to show positive earnings surprises. The sell discipline is very strict and foresees selling companies as soon as they show negative earnings surprises in order to avoid the "value trap". The portfolio is highly diversified (65 to 90 stocks) with a maximum weight for a single stock equal to 5% and a maximum sector over/under-weight with respect to the benchmark of +/-5%.

### Investment Strategy

The fund seeks to provide durable positive absolute returns by applying a disciplined value style approach. The managers consider themselves as business, rather than stock market, investors. Their approach concentrates on long-term investment and not on market specific factors and short-term phenomena. This means focussing on selecting businesses that will offer upside potential with limited downside risk. The belief that certain businesses have a greater earning power forms the basis of this process. Earning power is defined as a company's ability to generate substantial discretionary free cash flow over a sustained period of time. The managers believe that only in this way can a company generate wealth for its shareholders, and provide long-term capital appreciation. Investments are made on a business by business basis, irrespective of market capitalisation, sector or industry, and only when share prices represent a significant discount to the intrinsic value of the business.

### Investment Strategy

The fund takes advantage of climbing (long) and falling (short) prices across some 50 equity, fixed income and currency markets worldwide. The aim is to produce a return of 2-4% above prevailing interest rates (EURIBOR). This is done via an innovative, prognosis-free quantitative system based on mathematical algorithms. These indicate, on a daily basis, how many long or short positions should be taken in the various markets, relying on the recent price trends. As a result positive returns can be achieved under any market conditions, independently from forecasts or market opinions, and with risk tempered by the diversification across several different markets.

### Investment Strategy

The fund uses nine low-correlation investment strategies to provide dynamic exposure to multiple asset classes, within a universe consisting of a subset of equities, fixed income securities and currencies. The fund will implement the different strategies through "pair trades", which combine a long position that is offset by a short position. Over time, the fund is aiming at building a market neutral portfolio. The product employs strict risk management guidelines with focus on risk-adjusted returns. It thereby offers investors a highly diversified portfolio with a high level of downside risk protection and a target return of 1 month Euribor + 7%.

## Investment Strategy

The fund seeks to preserve shareholder capital and to provide a return exceeding the average return of the European high-yield bond market. The fund uses its reference index as a benchmark for investment purposes. The fund invests a minimum two-thirds of its net assets in high-yield fixed-income and floating-rate debt securities that are issued by private borrowers and public authorities domiciled in Europe or predominantly active in Europe. The fund may invest up to one-third of its net assets in debt securities denominated in currencies other than the Fund's base currency or which do not meet the above restrictions regarding country or geographical area, as well as in money market instruments. In addition, the fund may invest up to 10% of its net assets in equity securities. The investment manager aims to hedge non-Euro investments to Euro, this is achieved via derivatives.

### Investment Strategy

The fund seeks to achieve attractive risk-adjusted return by identifying target bonds and eliminating uncompensated risk. The fund manager rigorously screens the investment universe for risk in order to quantify upside potential using bond analysis, not equity-style analysis. By targeting the "sweet spot" for risk compensation, the manager's goal is to eliminate rather than include bonds. The underlying belief is that to deliver attractive returns it is more important to recognise which bonds not to include in the portfolio, than to focus on the ones that should be selected.

### Investment Strategy

The fund seeks to achieve consistent, superior rates of return with low volatility, by investing primarily in debt securities rated BBB- or better by S&P or Baa3 or better by Moody's at purchase. The fund manager uses a top-down analysis to exploit opportunities and neutralize unwanted risks, and a bottom-up analysis to maximize total return. The fund manager protects the downside by understanding the risk exposures within the portfolio and the correlation among assets, by diversifying risk factors, by defining/articulating an exit strategy for each position, and by carefully monitoring expected tracking error.

### Investment Strategy

The fund follows the "All Equity" process and is managed on the belief that it is possible to exploit market inefficiencies when financial market valuations have moved away from their trend, or where information structures are rigid. These inefficiencies are a result of human behavioural and institutional factors, including different reactions to news flow, different investment objectives and different levels of risk aversion. The process invests without a systematic bias towards specific market segments and aims to be market neutral over time. This investment process identifies inefficiencies by integrating fundamental valuation analysis and systematic trading algorithms. It is, as such, a highly quant driven process.

### Investment Strategy

The fund invests a minimum of two-thirds of its net assets in equities, other equity shares such as co-operative shares and participation certificates (equities and equity rights), dividend-right certificates and warrants on transferable securities issued by companies which are domiciled in Denmark. It invests according to a fundamental bottom-up stock picking approach indentifying companies considered to have the greatest upside potential. These are selected on the basis of attractive valuation, positive earnings momentum and positive news flow.

### Investment Strategy

The fund taps into a potential investment universe of small and mid-size companies having a stock-market value between two and ten billion Euros (as measured at the time of acquisition), which are domiciled or exercise the predominant part of their economic activity in Europe. Additionally, the fund focuses on researching structural growth industries in order to identify companies with long term earnings power. Portfolio managers invest in market leaders within an industry and pay only for companies which stand to deliver the best Growth at Reasonable Price (GARP).

## Investment Strategy

The fund applies a unique process to construct a portfolio of "boring" equities with stable returns based on an objective, computer driven, quantitative stock screening model. The process identifies companies that operate in established lines of business, generating consistently stable earnings, dividends, cash flows, etc. This stability helps dampen price volatility of such companies' stocks, making them less risky than the broader market. There is also a high degree of portfolio diversification with 100 to 150 stocks typically making up the portfolio, thereby adding a further layer of stability. The goal then is to offer investors the benefits of long-term return opportunities in the global equity markets, without the risk of significant capital losses in the short to medium term as is the case with conventional "hot" stocks.

### Investment Strategy

The fund seeks to preserve shareholder capital and to provide an absolute positive return to the shareholder in excess of three-month European interest rates. The fund invests in all permissible types of asset classes such as equities, bonds and money market instruments. The fund invests globally and the base currency is not necessarily equal to the currency of the investments made by the fund.

### Investment Strategy

The fund invests a minimum of two-thirds of its net assets in fixed-income and floating rate debt securities issued by private borrowers and public authorities domiciled in Denmark. The Sub-fund invests in bonds denominated in DKK. It invests in government bonds or bonds issued by local authorities or agencies, mortgage bonds, corporate bonds with a good rating, and bonds issued by supranational institutions. The fund may further use derivative instruments to reduce risks. The fund aims to exploit market movements as well as the yield spreads between various credit risk segments.

### Investment Strategy

The fund invests a minimum of two-thirds of its net assets in fixed-income and floating rate debt securities issued by private borrowers and public authorities domiciled in Denmark. Investments are made primarily in Danish mortgage backed bonds with a remaining term to maturity of a minimum 15 years and/or Danish government bonds with a remaining term to maturity of minimum 5 years listed on the Copenhagen Stock Exchange. In order to ensure a stable yield, a significant proportion of the Sub-fund's capital is invested in a core holding, which will not under normal circumstances be restructured.

### Investment Strategy

The fund invests a minimum of two-thirds of its net assets in fixed-income and floating rate debt securities issued by private borrowers and public authorities domiciled in Denmark. Investments are made primarily in callable Danish mortgage backed bonds listed on the Copenhagen Stock Exchange. The holdings of Danish mortgage backed bonds in the Sub-fund will typically have high coupons in comparison with the general yield level of bonds with similar durations. Investments in Danish government bonds listed on the Copenhagen Stock Exchange are also permitted.

## Investment Strategy

The fund invests a minimum of two-thirds of its net assets in fixed-income and floating rate debt securities issued by private borrowers and public authorities denominated in EUR. This sub-fund invests in government bonds or bonds issued by local authorities or agencies, mortgage bonds, corporate bonds with a good rating, and bonds issued by supranational institutions. The fund may further use derivative instruments to reduce risks. The fund aims to exploit market movements as well as the yield spreads between various credit risk segments.

## Investment Strategy

The fund aims to provide an absolute positive return to investors in excess of a 3-month European interest rate. To achieve this goal the manager uses corporate bonds directly or indirectly through the use of derivatives, and other types of transferable securities and money market instruments. The idea is to exploit market inefficiencies by focusing on company specific research to identify long term changes critical to credit quality. The focus is on avoiding losers rather than picking winners.
